

AMXhome Native Devices List May 2009

AMXhome utilizes two types of devices, separated into "native" and "generic" categories. Native devices, in general, are devices that require two-way communication. Categories for native devices currently include music and movie servers, distributed audio switchers, distributed video switchers, tuners, thermostats, and lighting controls. The programming and touch panel template pages have already been developed for these devices. Generic devices are controlled through one-way IR or RS-232 commands. Displays, Receivers, DVD players, Set Top Boxes, and other source devices are considered "generic" devices in AMXhome, and you can add any of these devices you use today by simply adding the IR file, or populating the appropriate serial strings.
